

Unit-2

1. a) Checking all elements sequentially
2. Binary search requires the array to be sorted
3. What is the middle index formula used in binary (low to high)
 - a) $\frac{\text{low} + \text{high}}{2}$
4. Which data S uses FIFO Queue.
5. Which data S uses LIFO Stack
6. b) Remove the top element
7. b) Data & link to next node
8. c) The 1st node
9. a) Null in its next pointer
10. b) Rear
11. a) Front
12. b) Insertion to Postfix Conversion
13. b) Insertion at middle
- X 14. a) Sorting Integers
- X 15. Length of common prefixes but wrong suffix.
- X 16. a) Array
17. b) Shift subsequent elements 1 position right
18. c) Target is not present in the sorted array
19. Compare alphabetic order of entire word
- X 20. All nodes get deleted.

21. Reverse the direction of next pointer
22. a) When next pointer is null
23. b) Next of ~~head~~^{new} node
24. d) Swap front & rear nodes
25. a) Reading in open bracket
26. b) The operand value
27. c) Rear = Null
28. d) Hash table
29. a) Task scheduling by CPM
30. a) Compare each character with all previous & copy unique ones, ~~not store~~
